Maine Recycling Units are designed to fit within Maine's existing storage ranges, keeping the workspace both efficient and co-ordinated for office storage and waste,

A variety of Recycling Units can be specified in a range of options for adding waste from a simple postal slot to front-loading swinging panels or top loading easy drop holes. The internal bins are easily accessed and can be locked if necessary, including the ability to lock the cupboard doors individually to manage confidential waste. The units are available in any colour, including tonal shades and corporate colours, with or without signage.

The units themselves are 98% recyclable, with 40% recycled previously.
