Ambidextrous

Contemporary

Maineframe is an innovative new product designed by Maine. The storage units are based on the classic Maineseries31 range and have all the benefits of this flexible and durable design range as well as offering tambour fronts. Maineframe is available in 7 different heights and 2 different widths, allowing complete flexibility to suit your requirements. With the added benefit of optional desks as part of the Maineframe range, we provide the complete workplace solution.

No matter how hard you try, there is often dead space under a desk that is difficult to utilise. Maineframe's new innovation offers a solution, making use of this space by providing efficient and productive storage in its place. The centre storage unit is custom built to requirement and can support alternate desks on either side. Each desk has access to many different types of storage that can be custom specified in your own unique design.

Maine units can be manufactured in any colour, including tonal shades and corporate colours. These colours can be specified from BS, RAL, Pantone or Dulux Colour Dimensions palettes as well as specialist paints, including Hammerite, Metallic, Polychromatic, and Pearlescent finishes.
